

December 16, 2004 - Richmond, California. AEI Press Release 2004/03.

AMROHA Engineering Inc. AMROHA Engineering Inc. enters ODM manufacturing of Vehicle Underside and Peripheral Imaging Systems ("UVIS").

Amroha Engineering Inc., an original equipment manufacturer (OEM) and a distributor of security products, today announced today that it has entered into the manufacturing of its original design, vehicles' underside and peripheral imaging systems for security applications.

AEI has elected to use open technologies, which include low pixel size linear scanning cameras. In addition to the use of linear scanning cameras, AEI systems will also include license plate reading cameras with automated license plate reading software and a motor vehicle identification through motor vehicle departments' databases. This additional software is designed to help UVIS operators focus on their core objective of detecting under the vehicle unexpected packages, such as explosives or drugs, being smuggled into secure airports' area.

In a statement, AEI's President Mr. Shams Naqvi stated, "Through its employee-base, AEI has a substantial background in high performance imaging on ultra-speed document transports, image processing and image character recognition. With AEI's position in the security industry, it is just a logical next step that AEI would be entering into the manufacturing of its own UVIS product. We are in a position to integrate the best equipment, technologies and software that cost-conscious customers have been looking for. The pricing and quality of the UVIS equipment currently available in the market will make us stand out among the leaders. We are convinced that the market for UVIS is applicable not only to the government and military security, but also in the commercial arena."

About Amroha Engineering Inc.
