

March 10, 2005 - San Francisco, California. AEI Press Release 2005/02.

**AMROHA Engineering Inc.** & Nesco Tech Solutions Announce Agreement for the Sale of Under Vehicle Imaging Systems to Pakistan Airport Security Force ("ASF").

Amroha Engineering Inc., an original equipment manufacturer (OEM) and a distributor of security products, today announced the signing of an agreement between Amroha Engineering Inc. ("AEI"), and Pakistan Airports Security Force ("ASF") for the sale of Under Vehicle Imaging Systems ("UVIS"). These units will be deployed at three largest major international airports in Pakistan. On AEI's side, the agreement was signed by its Pakistan arm, Nesco Tech Solutions (Pakistan) Pvt. Limited.

AEI, a system engineering and integration firm based in Richmond, California, is a distributor for security equipment in the US, Pakistan and Nigeria. Under this agreement with ASF, AEI will provide installation, training, and on-going maintenance services for the equipment. AEI was able to conclude this sale amidst a fierce competition from all major names in the industry. The winning points were AEI's strong knowledge of local tendering procedures, its demonstration of equipment's cost-effectiveness over a 3-year period, and the advanced technology used in equipment it is supplying. AEI further offered a strong presence in the local market through Nesco, AEI's local marketing arm for UVIS equipment.

In a joint statement, Mr. Shams Naqvi, President of Amroha Engineering, and Mr. Qamar Naqvi, CE of Nesco, stated, "For this sale, AEI has selected systems on the basis of its use of open technologies, and low pixel size Linear Scanning Cameras. In addition to the use of linear scanning cameras, AEI is also installing license plate reading cameras. We are also in advanced discussions with a local group of experts specializing in image post-processing and image-based character recognition. This software, though not a part of the current ASF order, is being offered to ASF for automated data entry of the vehicle's license plate numbers. This addition will free up the operators to focus on their core objective of detecting under the vehicle unexpected packages, such as explosives or drugs, being smuggled into secure airports' area."
